## BITS WILP Data Mining Mid-Sem Exam 2017-H1 (Regular)

[Index](#)   [Subjects](#) ▼   [Mail Us](#)

[Download solutions](#)

**Birla Institute of Technology & Science, Pilani**  
**Work-Integrated Learning Programmes Division**  
**Second Semester 2016-2017**  
**Mid-Semester Test (EC-2 Regular)**

Course No. : IS ZC415  
 Course Title : DATA MINING  
 Nature of Exam : Closed Book  
 Weightage : 30%  
 Duration : 2 Hours  
 Date of Exam : 25/02/2017 (AN)  
 No. of pages: 2  
 No. of questions: 5  
 Note:

- Please follow all the *Instructions to Candidates* given on the cover page of the answer book.
- All parts of a question should be answered consecutively. Each answer should start from a fresh page.
- Assumptions made if any, should be stated clearly at the beginning of your answer.

Q.1 (a) What is mode of the following data?  
 10, 2, 30, 14,  
 50 [1]

Q.1 (b) Eleven students were asked to measure their pulses for 30 seconds and multiply by two to get their one minute pulse rates. The results were: 62, 32, 60, 66, 70, 72, 74, 74, 78, 80, 84. Create five-number summary for the pulse rates and draw boxplot. [3]

Q.1 (c) Students admitted for a certain course have mean score of 560 and a standard deviation of 60. Calculate the z-score of a student having a score of 500. [1]

Q.1 (d) Calculate the cosine similarity between the two phrases below. Feature vector of a word occurring multiple times is greater than 1. Clearly show steps of your calculations.

mid term regular exam  
 regular exam mid term mid term regular exam [2]

Q.2. You are given 10 training samples. They are divided into four classes: A, B, C, and D. One sample belongs to A, two belong to B, three belong to C, and four to D. Use the following  $\log_2$  table to answer the questions:

**Life Lessons By Steve Jobs**

p	$\log_2(p)$
0.1	-3.32
0.2	-2.32
0.3	-1.74
0.4	-1.32
0.5	-1.0
0.6	-0.74

- (a) What is the total information contained in the samples? [2]
- (b) What is the total Gini index? [2]

Q.3 (a) Given below is a database of flight delays over a period and under various conditions. We Want to create a decision tree classifier with information gain(entropy) as the attribute splitting criterion.

Feature	Value = Yes	Value = no
Rain	Delayed=30, not Delayed=10	Delayed=10, not Delayed=30
Fog	Delayed=25, not Delayed=15	Delayed=15, not Delayed=25
Summer	Delayed=5, not Delayed=35	Delayed=35, not Delayed=5
Winter	Delayed=20, not Delayed=10	Delayed=20, not Delayed=30
Day	Delayed=20, not Delayed=20	Delayed=20, not Delayed=20
Night	Delayed=15, not Delayed=10	Delayed=25, not Delayed=30

Which feature should be at the root of decision tree? [2]

Q.3 (b) Given the following training documents and their classes:

Document#	Content of document	Class
1	good	Ham
2	very good	Ham
3	bad	Spam
4	very bad	Spam
5	very bad very bad	Spam

Use Naïve Bayes classifier with Laplace (+1) smoothing to find the class of a document with the following contents:

very good bad very very bad [5]

Q.4. Suppose you have the following candidate itemsets of length 4:  
 $\{1\ 2\ 3\ 5\}$ ,  $\{1\ 2\ 4\ 7\}$ ,  $\{1\ 2\ 5\ 6\}$ ,  $\{1\ 3\ 5\ 9\}$ ,  $\{1\ 4\ 5\ 7\}$ ,  $\{1\ 5\ 6\ 9\}$ ,  $\{2\ 3\ 5\ 9\}$ ,  $\{3\ 4\ 5\ 9\}$ ,  
 $\{4\ 5\ 6\ 8\}$ ,  $\{5\ 6\ 7\ 9\}$

- (a) Use hash function  $k \bmod 5$  to create a hash tree of the itemsets. Assume that each leaf node can store a maximum of three itemsets. [4]
- (b) Given transaction  $\{1, 2, 3, 5, 7, 9\}$ , which leaf nodes of the hash tree will be visited for support-counting? Clearly show the visited leaf nodes in the hash tree. [2]

Q.5. Given that min support is 2, and min confidence is 70%, find all association rules from the following market basket dataset using Apriori: [6]

Transaction ID	Items
1	a, b, c
2	b, c, d, e
3	c, d
4	a, b, d
5	a, b, c
